

iDrive Power System™ — Strength Starts Where Failure Usually Begins

Why iDrive Is Different

Most fence failures don't start at the top—they start at the weakest point in the system, usually below the ground.

Traditional fences rely on concrete footings poured into disturbed soil. Over time, those footings can crack, lift, or settle as the ground moves around them. Many contractors try to compensate by overbuilding other parts of the fence, but no system can outperform its point of failure.

The iDrive Power System™ takes a different approach.

iDrive prioritizes strengthening the weakest link first—starting with the foundation. Instead of removing stable earth and replacing it with concrete, iDrive posts are driven deep into **undisturbed soil**, where real strength lives. From there, the entire fence system is evaluated and built to work together, not against itself.

Because overbuilding the wrong part doesn't make a fence stronger—it just hides the problem.

Every iDrive installation is verified on your property, ensuring the foundation performs as designed before the fence is finished.

Foundation Guarantee Options

Every iDrive fence includes a strong foundation guarantee, with a clear upgrade option for homeowners who want maximum long-term protection.

Standard Foundation Guarantee — Included

- Three (3)-year foundation guarantee
- Backed by your installing iDrive PRO™ contractor
- Covers wind, frost heave, and ground settlement
- Applies when built to iDrive standards

Lifetime Triple Threat Guarantee™ — Optional Upgrade

- Lifetime coverage for as long as you own the home
- Covers wind up to 100 mph, frost heave, and ground settlement
- Available when the fence is built to full iDrive standards and properly documented
- Includes verified installation requirements
- Priced per post and provided through your contractor

Ask your contractor to explain which option best fits your property and long-term plans.

What You Get as a Homeowner

- A cleaner installation with minimal yard disturbance
 - Faster completion—no waiting on concrete to cure
 - Posts that resist leaning, sinking, and long-term movement
 - A fence built as a complete system, not isolated parts
 - Greater durability, value, and peace of mind over time
-

Fence Types Supported

The iDrive Power System™ strengthens the foundation across multiple fence styles:

- **Wood** — no buried wood, reduced rot risk
- **Vinyl** — steel-reinforced internal structure
- **Aluminum** — commercial-grade internal posts
- **Chain Link** — deeper, stronger driven foundations

Gates That Don't Sag

All iDrive fences use **Insta-Gate™** gate systems, designed to prevent sag, twist, and long-term alignment issues—because gates are often one of the first weak points in a fence system.

Build It Once. Build It Better.

Choosing iDrive means choosing a fence built around real strength—not guesswork, shortcuts, or overcompensation.
